To get a better idea of your skill set before proceeding with your application we would like you to answer the questions and task below. Let me know if you have any questions yourself.

1. Which Web application that you created are you most proud of and why?

2. What was the most problematic web platform limitation that you have encountered while doing Web development? And how did you resolve it?

3. Which new or upcoming Web technology are you most looking forward to and why?

4. Which HTML, CSS and JavaScript features would you like to see introduced or removed in future revisions of the standards and why?

5.Task: Create a calculator app without using any third-party libraries. The calculator should be capable of performing addition, subtraction, multiplication, division and exponentiation. It should be usable via mouse and keyboard. Before you start, choose three aspects that you intend to focus on (e.g. design, maintainability, etc.) and briefly explain why you chose each.

Please note: the more elaborate your answers, the easier for us to assess your capabilities and the more interest from your side it shows. There is no time limit to this task, however we will only start with our technical review once the answers and task are complete.
